## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. **Claim 2** is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. This use of the phrase "*the same*" is unclear and must be replaced with definite language.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless – (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. **Claim 1** is rejected under 35 U.S.C. 102(b) as being anticipated by *Szewczyk et al.*, US 5,250,138. This reference teaches a label sticking unit that moves toward/away from an adherend, and a space maintaining device mounted on the label sticking unit, which changes position when it contacts a face of the adherend, triggering a sensor when a desired distance is reached and sending a signal to stop the movement of the apparatus (throughout, e.g. [Col. 2, 12-44].

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. **Claims 2-3** are rejected under 35 U.S.C. 103(a) as being unpatentable over *Szewczyk et al.*, US 5,250,138. The teachings of this reference have been detailed above. *Szewczyk* does not expressly disclose the use of a *single* sensor, but multiple sensors [Col. 5, 14-22]. However, they are adjacent (see FIG. 3) and simple devices, and it would have been obvious to one of ordinary skill in the art at the time of the instant invention to combine them into a single part, to slightly reduce the overall complexity of the apparatus.

7. **Claim 4** is rejected under 35 U.S.C. 103(a) as being unpatentable over *Szewczyk et al.*, US 5,250,138 in view of *Suzuki et al.*, JP 08-034420. *Szewczyk* does not expressly disclose a *roller disposed on the contact member*; however, *Suzuki* does teach a roller (18) that changes position as it travels against the surfaces of adherends which are delivered along a conveyor (see claims, [FIGS. 1-5]). It would have been obvious to one of ordinary skill in the art at the time of the instant invention to combine the roller of *Suzuki* with the contact member of *Szewczyk*, to provide the means which contacts the conveyed adherends with the ability to travel freely across them, even at higher delivery speeds [0006].
